

Smart Recipe Saver

Project Overview:

The goal of this project is to build a personalized app that allows users to save food recipes from the internet in a clean, structured, and searchable format.

The user provides a URL to an online recipe. An AI-powered system extracts only the relevant information — such as ingredients, step-by-step cooking instructions, cooking time, servings, and an image of the final dish — while ignoring unnecessary content like background stories, ads, and long explanations.

The extracted recipe is then stored in a simple and visually clear format, making it easy for the user to revisit, browse, and reuse recipes in the future.

Problem Statement

Most online recipe websites are cluttered with:

- Long personal stories
- Ads and popups
- Poor readability on mobile
- Inconsistent structure

Users want:

- A clean recipe
- Fast access
- Personal control
- Offline or long-term storage

This app solves that by turning any recipe link into a standardized, minimal recipe card.

Goals & Success Criteria

Primary Goals

- Extract structured recipe data from any public recipe URL
- Save recipes in a clean, consistent format
- Make saved recipes easy to browse and reuse

Success Metrics (MVP)

- Recipe extraction works for most popular recipe websites
- Recipes load fast and are easy to read
- Users can find saved recipes in under 5 seconds

Level:

Easy to Medium

Type of Project:

AI Development, Food, Personalization

Skills Required:

- Python
- APIs
- Image Processing (for visual explanation)
- UI development

Key Features

Milestone 1: Get https links and extract the data

- AI-Based Recipe gather information:
 - User pastes a recipe URL
 - System extracts:
 - Recipe title
 - Ingredients list
 - Step-by-step instructions
 - Cooking time
 - Servings
 - One representative image (if available)

Milestone 2: Personal Customization:

- Consistent layout for all recipes
- Focus on:
 - Ingredients
 - Steps
 - Time
 - Image
- No ads, no stories, no unnecessary text
- Save the recipes so it can be found easily in the future.
- Display recipes as cards (image + title)
- Simple browsing interface

Milestone 3: Shopping List Feature

- Button: "Add to Shopping List"
- Automatically extract ingredients into a checklist
- Each ingredient can be:
 - Checked off
